Steps to run the project:

1. Enter to the directory where the .zip file has been extracted and the project is located.
2. Run the following commands:
   javac -sourcepath src src/runner/OperationSahure.java
   java -cp src runner/OperationSahure

Project Description:

The objective of this project was to simulate an arrest operation based on a Ponzi pyramid scheme. The project will organize the input data into a tree of targets (people participating on the scheme). Each target will have its asset, sponsor, mentor and children as specified on the input log file. The program will generate the route of arrests that collects the highest asset based on the arrested targets, this route will follow a specific number of arrests also provided on the input file.
